Role of 3-D ultrasound in clinical obstetric practice ...

In recent years, 3 dimensional (3D) and 4 dimensional (4D) ultrasounds have become increasingly popular and readily available. With 3D ultrasound, a series of thin 2D slices is digitally reconstructed to give more life-like images. With 4D ultrasound, the added dimension is time, so that the 3D images appear to be moving in real time. The 3D/4D image usually appears a golden colour on the ultrasound screen, as this colour is easy for patients to look at and highlights features on the baby.
