mold or removing material from base material objects, 3D printing starts with a virtual 3D model that is transformed into solid form one layer at a time. Each layer is built on top of the layer before, creating a solid form representing the virtual 3D model in all of its complexity and detail without requiring additional forms of machining and treatment necessary in ...

## *Beginners*

3D printing is a form of additive manufacturing. Objects are built in small layers, stacked on top of each other one at a time. It can be quite a slow process, but it does have many benefits. For comparison, a subtractive manufacturing process starts with a solid block of material, and removes bits until the final product is born.
