Existing evidence of the association between personality traits and coping in general populations indicates that certain personality traits may impact coping strategies and, therefore, account for a protective factor against the short and long-term consequences of stress (Eley et al., 2013). For example, conscientiousness has received a great amount of attention as a protective factor from stress because it has been associated with task-oriented coping.

The Relationship Between Personality Traits and Coping ...

Specifically, coping is conceptualized as an individual's cognitive and behavioural efforts to manage the demands, both internal and external, of a stressful transaction (Folkman et al., 1986). Coping strategies are used to mitigate issues which are causing distress and impacting emotions (Folkman et al., 1986).
