Lung Cancer: Current
Therapies and New
Targeted Treatments

Lung Cancer

Astrazeneca

Lung cancer is the most
common form of cancer
worldwide, with
approximately 2 million
cases diagnosed and 1.8
million deaths every
year. 1 Only 16% of

Get Free Lung Cancer

patients are diagnosed when the tumour is still localised to the lung and for those patients diagnosed at a later stage, the prognosis is especially poor. 2 As such, AstraZeneca is prioritising lung cancer research to address the significant unmet need for treatments at every stage of the disease continuum.
