Natural Resource Economics Overview •Natural resources are good provided by nature. •Oil •Natural resource economics is about modeling the "optimal" utilization of these goods. •Economic questions •How much should we extract now vs. later? •How do market extraction rates compare with the social optimum?

### LECTURE 16: NATURAL RESOURCE ECONOMICS

Key Points. Natural resource economics focuses on the supply, demand, and allocation of the Earth's natural resources. Every man-made product in an economy is composed of natural resources to some degree. Natural resources can be classified as potential, actual, reserve, or stock resources based on their stage of development.

Resource economics deals with human use and sustainability of natural resources. One of the fundamental rules of any economics discipline is the question of trade-offs. The assumption exists that we will always want more than we can have and gaining something naturally means we are doing without something else. Thus, there is a trade-off.

[What is Resource Economics? \(with pictures\)](#)

The 5 Most Important Natural Resources are: Air: Clean air is important for all the plants, animals, humans to survive on this planet. So, it is necessary to take measures to reduce air pollution. Water: 70% of the Earth is covered in water and only 2 % of that is freshwater.

Natural resource economics deals with the supply, demand, and allocation of the Earth's natural resources. One main objective of natural resource economics is to better understand the role of natural resources in the economy in order to develop more sustainable methods of managing those resources to ensure their availability for future generations. Resource economists study interactions between economic and natural systems, with the goal of developing a sustainable and efficient economy.

[Natural resource economics - Wikipedia](#)

Natural resources play a critical role in the economic growth and development of a country and various categories of natural resources can be utilised to stimulate economic growth. Over the past two centuries, the world has undergone unprecedented economic growth due to consumption of natural resources.

[Natural Resource Economics - 3044 Words | Essay Example](#)

Natural resources are either renewable (eg trees) or non-renewable (eg crude oil). This distinction is important as it influences the way the resources have to be managed in production.
