~~Small Grain Production Guide | NC State Extension~~

A wheat crop yielding 65 bushels per acre will take up about 70 pounds of nitrogen per acre. See chapter 9 of this guide, “ Soil Management, ” for more information on soil fertility in organic production. Some organic farms are demonstrating large N carryover and may not need any spring nitrogen.

~~Chapter 4: Crop Production Management – Wheat and Small...~~

In NC, wheat is grown in a double-cropped soybean production system. This allows the risk of crop failure to be spread across two harvests and increases income potential. A full-season soybean budget is included for comparison with wheat double-cropped bean production.

~~NC Small Grains | NC State Extension~~

For upper half Duplin County, wheat planting should begin October 20-25. For lower half Duplin County, wheat planting should begin October 25-30. The noted dates are early enough to insure warm weather to promote tillering. The noted dates are late enough to avoid excessive growth and high risk to insects/diseases.
