Lists A list is an ordered collection of values. Lists are enclosed in brackets ([]):

```
patientids = [42446, 42113, 42007]
segmentlist = ["MSH", "EVN", "PID", "NK1", "PV1"]
```

Lists can contain numbers, strings, or other lists. Assignment From Lists You can assign a list to a variable or to multiple variables at once:

Welcome to PySchools Python Quick Reference Guide ...

When an object's reference count reaches zero, Python collects it automatically.

```
a = 40 # Create object <40>
b = a # Increase ref. count of <40>
c = [b] # Increase ref. count of <40>
del a # Decrease ref. count of <40>
b = 100 # Decrease ref. count of <40>
c[0] = -1 # Decrease ref. count of <40>
```

Python 3 – Quick Reference Card  
This reference manual describes the syntax and “core semantics” of the language. It is terse, but attempts to be exact and complete. The semantics of non-essential built-in object types and of the built-in functions and modules are described in The Python Standard Library. For an informal introduction to the language, see The Python Tutorial.

Cheat Sheet [http://www ...](http://www...)

Python names (also called identifiers) can be any length and follow these rules:

- The first or only character must be a letter (uppercase or lowercase) or the underbar character, “\_”.
- Any additional characters may be letters, underbars, or digits.

This guide is specifically for  
contributing to the Python  
reference interpreter, also known  
as CPython (while most of the  
standard library is written in  
Python, the interpreter core is  
written in C and integrates most  
easily with the C and C++  
ecosystems). There are other  
Python implementations, each with  
a different focus.
